capa**N**CDT // Capacitive displacement sensors and systems

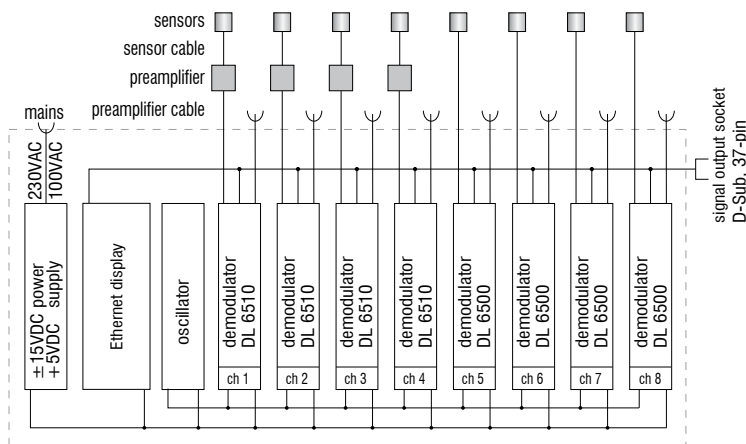

- Multi-channel system with sub-nanometer precision resolution
- Virtually independent of temperature
- Also measures against insulators
- As benchtop unit and as card carrier for a 19-inch format
- Integrated calculation function for thickness measurements
- Numerous filters, averaging, trigger functions, measured value storage, digital linearization

System design

The capaNCDT 6500 can be used for multi-channel operation and is modular in its design. Up to eight sensors can be connected to the signal conditioning electronics (Euro-size cards) via a preamplifier module.

For the DL6530 version, the pre-amplifier is integrated in the housing and is used for cable lengths up to 4 m (with CC cable) or 8 m (with CCg cable). For longer cable lengths, the external preamplifiers CP6001 or CPM6011 are used.

A measuring system with n measurement channels consists of:

1. controller DT6530 with power supply, display, Ethernet, oscillator and analog output
2. n x demodulator modules DL6510 (DL6530 with integral pre-amplifier)
3. n x pre-amplifier connecting cables
4. n x pre-amplifier modules CP6001
5. n x sensor cables
6. n x sensors

DL6510: One item of position 2 to 6 is needed for each channel.

DL6530: One item of position 2, 5 and 6 is needed for each channel.

Web interface

The web interface for controller configuration opens via Ethernet.
Up to 8 channels can be visualized and linked arithmetically.

System configuration

System capaNCDT 6500 (with integral pre-amplifier):
